Let Vaughan's "Glamour Tags" Tell and Sell for You

New! Improved! HEAVIER-GAUGE PLASTIC (.020"), STRONGER, EASIER TO INSERT IN SOIL . . . THEY ARE LASTINGLY BEAUTIFUL!

Yes, now you can just push one of these tags into the soil of a Pak of your plants and add real "Instant Glamour." Glamour Tags show the retail customer how attractive the blooms are, tell everything about the plants that normally takes the time of a clerk and they sell the customer who would be lost when no clerk is available.

Bedding plant wholesalers will find that Glamour Tags in their Paks add that "extra-value" that makes sales easier, larger and more profitable.

Printed in full, glorious color, these heavier (.020") plastic Glamour Tags are easier to handle and practically indestructible. They make good plants sell better. Available in all varieties listed.

Asters in the Greenhouse

The off-season production of Asters as a greenhouse crop is proving most profitable. While Asters can be flowered all year on a schedule similar to the one used for "Mums," it is as an early Spring and Summer cutflower they are at their best.

Requirements are simple: a night temperature of 50° and the use of additional lighting from the seedling stage until plants are 20 to 24 inches tall. We recommend the use of 60 watt bulbs with reflectors spaced 5 ft. apart (the lighting arrangement as you have it set up for Mums will do nicely). Additional lighting must be given from September 1st to May 1st, or until the first flowers show color, and from sunset to 10:30 P.M. At other times the natural light is sufficient.

Use sterilized soil and space plants 8 x 8 inches.

We find this schedule works out satisfactorily in most areas. However, there is apt to be more variation from year to year than with Mums.

Outdoor Aster Growing

The most widely advertised Wilt Resistant Aster will show no resistance to Wilt when grown in badly infected soil. We suggest a different location each year for your Aster planting, as well as steam sterilization of soil. Sow seed six weeks before planting out date and three weeks after seed sowing the seedlings should be put into Val-Peat Pots and three weeks later they will be ready for planting out. Space a foot apart in beds to insure a working area to set up wire or string supports. A cloth or plastic covering will provide protection against the leaf hopper which spreads Aster Yellows. An occasional spraying or dusting of your planting with Parathion should protect your Asters from infection. We recommend the use of Parathion only for those experienced with it. D.D.T., although not quite as effective, is recommended where safety is a factor.

All F-1 Hybrid Begonias from Seed

ANNUAL 30,000 seeds 1/32 oz. 68° 2-3 weeks.

Adaptable to all growing conditions, Begonias have rapidly forged ahead as one of the most popular pot plants and a very popular bedding plant.

Improved strains and the introduction of F-1 Hybrids is playing a large part in keeping this versatile plant as one of the leaders, not only as a pot plant but in the garden border where it thrives in partially shaded areas.

Use them in combinations—keep a supply of Begonias in 4 or 5 inch pots. There is ready sale for this versatile plant.

Sow seed in a non-acid peat or light well drained material for best germination. Do not cover, except with paper, until seedlings sprout. Keep surface of flat uniformly moist. A minimum temperature of 60 degrees will insure best results and give nice pot plants for spring sale. Shade in the greenhouse in summer. December-January sowing will give nice 3 inch plants for May bedding sales and combinations. For Christmas and mid-winter pot sales sow in July.

For reasons of economy and as a space saver, shift seedlings to flats, spacing 2 x 2 inches, grow on until plants become crowded then transfer to 3 or 4 inch pots for ready sale.

CAUTION: Begonia seedlings will burn if exposed to full sun. Recommend using a good, well shaded house high in humidity.

Calceolaria

ANNUAL 20,000 seeds ½ oz. 68° 2-3 weeks

In sowing Calceolaria seed, use only loose, sterilized material. Responds best when a night temperature of 60° is maintained. Seed being very fine does not require soil covering. During bud development period a temperature of not over 50° is recommended (Cornell University). When plants are of sufficient size to handle, put into small Val-Peat Pots, later shifting to 4 or 5 inch pots. A regular insect spraying program should be instituted and we recommend the use of Parathion. Calceolaria are most susceptible to aphis. Give some shade from late February on and water planting only when dry. Too much water causes yellowing of foliage.

Hybrids Mixed (F-1 Multiflora Nana. Gilbert's). Large flowerheads, good stems and a brilliant range of color which includes reds, yellows, bronze and pastels from solid to mottled. Good foliage and earliness of bloom as well as a compact flowerhead on not too large a plant combine to make this one of the most desired pot plant varieties. Originator's Trade pkt., **$3.50.**

Multiflora Nana Mixed. The average size of the blooms is only 1½ inches, but the amount of flowers produced is unsurpassed. The color scheme is extraordinarily gay and full of contrast. Pinch out center to make well shaped bushy stock. Trade pkt., (2500 seeds) **$1.50;** 1/128 oz., **$2.75;** ⅛ oz., **$5.00;** ½ oz., **$9.00.**

CARNATION FRAGRANCE

Cineraria

ANNUAL 6,000 seeds 1/32 oz., 68° 2-3 weeks

A January sowing will provide nice 3 inch plants in May for combination work. For best results do not pinch.

CAUTION: Do not use soil in which Mums have been grown, particularly if your Mum planting was affected with Verticillium wilt or Seidewitz disease. Soil-borne fungus such as these will quickly attack your Cineraria causing the lower leaves to wilt and die and then gradually kill the entire plant. Steam sterilization of soil is important and as a prevention we recommend the use of new field soil from seed flats to finished pot.

Vaughan's Rainbow Coleus

ANNUAL 3,500 seeds 1/32 oz. 68-86° 2-3 weeks

There is a marked increase in the demand for this brilliantly colored, always popular foliage plant. Much used in combinations, the Coleus has proven its value as a bedding plant in shady locations. Our strain contains the brightest color selections and is grown for us by a specialist who understands the need of the most critical grower. All our seed is Greenhouse Grown.

Coleus are easily grown from seed. 3-inch pot plants are ready in 3 months or less, when grown at 65 degrees. Give full sun in winter and light shade in spring in the greenhouse. When grown as a pot plant in the house, plants should be grown in a sunny window. In the garden it thrives in either partial or full shade.

To preserve the brilliant color tones, remove flower buds as they form. Valuable as a pot plant or for use in combination or in shady or semi-shady locations.

Annual Larkspur

ANNUAL 8,500 seeds oz. 54° 3-4 weeks

Larkspur does not germinate well in hot weather and we recommend chilling seed for several days in an ice box (45°-50°) if sowing must be made in summer heat.

For growing under glass to follow late Mums, we recommend a planting in late December to early January, and band or pot the seedlings. Plants are spaced 10 x 10 in. on raised benches and grown at 45°-50°.

Direct ground sowing will bring Larkspur into crop in early spring. From an August 15th to September 15th sowing, seedlings will be of sufficient size to winter over if given a light mulch. Another method is to sow seed in late October to November so it will not germinate until early the following spring. Care should be made to select a location with good drainage.

Our revised listing includes only those colors that have proven satisfactory under varied growing conditions. All are base branching, except the Giant Hyacinth Flowered. 2 to 3 ft.

GLITTERING, GLAMOUROUS, PROFIT-BRINGING BEAUTIES

With the introduction of the new "Gold Coin" Series, a successful program for forcing has been established—one that insures blooming plants in pots for early Spring sales—approximately 6 weeks from sowing to selling.

We suggest seed be sown in mid-February in the greenhouse. Successive sowings may be made to insure marketable plants over a long period. Maintain a night temperature of 65 degrees fahrenheit. Immediately on emergence limit day length to 9 hours by the use of Chrysanthemum cloth. When two true leaves have formed, prick off into 3 inch peat pots and continue to limit day length to 9 hours for a total of 30 days. At this point cloth may be removed and plants marketed as soon as desired.

Close examination of the growing tips will reveal the tiny buds, even at this early stage. Development continues to normal bloom in the pot along with a corresponding increase in plant size.

These newest F-1 Hybrids are perfectly uniform, plants of a variety all respond at exactly the same rate, given equal growing conditions, making it possible to bring along marketable plants in weekly succession if so desired.

So well does the "Gold Coin" Series respond to these new forcing techniques, it is possible to sell budded or blooming plants early—from April 15 on—and assure customer of a spectacular display throughout the entire season—not restricted to blooming in late Summer or early Fall.

Pansies For Bedding

ANNUAL 24,000 seeds oz. 55-90° 2-3 weeks.

Pansies now vie with Petunias in importance as spring bedding plants. This popularity is due to improvements in strains in recent years, and newer methods of culture. The home gardener likes the Pansy—have plenty for early spring sales. Basically there are two methods of culture, either will assure your having strong healthy plants in bloom early.

Mid-winter sowing, late November through January. When seedlings are of a size to handle, transplant to small flats or "paks" and grow on cool, 50 degrees, and be assured of blooming plants for earliest sales. Six blooming pansy plants in a Vaughan Val-Pac container is something the home gardener will find hard to resist.

Summer sowing, early August, has for many years been the accepted time to start pansies. Spaced 4 x 6 inches in a cold frame, given winter protection, loose straw, perhaps, plants will be well established before winter sets in. Here again blooming plants are available early in Spring.

All Double Petunias For Pots—Bedding—Combinations

Sow "Doubles" earlier than ordinary strains to have for sale at the same time. For "flat" or "pak" sales, allow 12 to 15 weeks from sowing to sale date—depending on your market needs. In Chicago, sow no later than December 15 for 3 inch for May combinations. January 1 sowing, grown cool, 50°, will insure strong 3 inch for late May. Well shaped plants with several blooms in 4 to 5 inch for April and May pot plants, or 3 inch for March, result from seed sowing not later than November 15.

Like all other Petunias—"Doubles" need good drainage and cool temperatures. Dwarf habit of growth is lost if grown too high. 55° is ideal.

Three and four inch pots of "Doubles" are ideal for May combinations.

There is a ready sale in "paks" or "flats"—6 or 12 plants to the "pak" is much in demand.

As a "Come-on" for the early shopper in March and April, offer 3 inch blooming pots. Resulting sales will surprise and please.

"Doubles" in 2¼ to 3 inch Val-Peat Pots find ready sale. An open flower or a bud showing color is your best sales aid. Vaughan's "Glamour Tags" with their color illustrations are eye-appealing. Details of these new tags will be found on page 1. The quality of the peat pot grown Petunia is outstanding and is sure to bring back the ever satisfied customer.

Heavy three to five inch pots are in demand for Mother's Day.

The F-1 Hybrid Multifloras

ANNUAL 280,000 seeds oz. 68° 1-2 weeks

Only in size of flower does the F-1 Hybrid Multiflora Petunia differ from her F-1 Hybrid Grandiflora sister. Medium sized blooms are produced in great profusion and literally cover the entire plant. Brilliant color tones, earliness, freedom of bloom over a long season, as well as compact plant habit make the F-1 Hybrid Multiflora particularly adaptable to bedding plant sales.

Use them in combinations where their brilliant color tones will stand out. For "mass effect" or use in the border, they are unexcelled.

Don't overlook potting a few in 3's for the late June buyer.

Increase your bedding plant sales with the F-1 Hybrid Multiflora Petunias. Have them available in good quantity. We offer only varieties that have proven by actual test their ability to withstand the most trying conditions.

VERBENA DWARF SPARKLE

ANNUAL 10,000 seeds oz.
68-86° 3-4 weeks.

Verbenas are among the most popular of the native American flowers. Color range and plant habit make them adaptable for all uses and locations.

The dwarf forms should be spaced about 6 inches while the spreading types require from 12 to 16 inches. Germination is slow and uneven—50 to 55% being considered an excellent stand. To hasten germination grow in soil at 65 degrees. When established a night temperature of 50 degrees is best. Pinch early to avoid straggly growth.

Good 3 to 4 inch pot plants are available for Spring sales from a February sowing. Mid-March sowing is recommended for Pak sales.

By nature the Verbena has divided itself into two classes—the spreading type which provides a carpet-like growth covering a wide area and the upright type which is bushy and branching but upright in growth rather than spreading. We have divided our listing showing the two distinct types.

ZINNIA F-1 ZENITH HYBRIDS

Zinnias . . . always popular for bedding and cutting

ANNUAL 2,500 to 4,000 seeds oz. 68-86° 1-2 weeks.

An easily grown annual that responds quickly when soil and atmospheric conditions are right. Wide variation in flower size, type and height has increased the interest in the Zinnia. It is now much used for cutting, because of its long lasting qualities, and makes an excellent background subject and dwarf sorts are also used in in the garden border.

More and more the home gardener is depending on the grower for his plants, preferring to buy them rather than make his own seed sowing. To insure a good supply of plants, we suggest seed be sown about 30 days before the start of your bedding plant selling season.

Zinnia seed may also be sown inside in February and March for inside cutting. Sown in April plants will bloom from May 20 to June 20 and from a May sowing cutting material will be ready from June 10 to 20.

Gem-Like Beauty for Garden-Border

Thumbelina. The ideal edging and border Zinnia. Extremely dwarf, compact plants that seem to thrive on close crowding. Plants spaced 2 or 3 inches apart in rows 6 inches apart soon appear as solid ribbons of color. Miniature double and semi-double blooms are freely produced. The colors bright and cheerful. Thumbelina is in bloom from earliest Summer to late Fall, does not lose its dwarf compact habit despite a constant increase in flowers. All America Gold Medal 1963. Hybrid tomato plants grown and sold in peat pots are very profitable. Selling any variety of tomato plants in peat pots leads to your customers satisfaction. Roots grow right through the walls; and, unless completely dried out before your customer plants pot and all, they start growing as though they'd never been transplanted.

NOVELTY VARIETIES

Instant Glamor

Tiny Tim. 45 days. Mostly a novelty for bedding plant growers this variety has become very popular because its fruits are comparable to "cocktail sized" tomatoes. We have picked ripe fruits 40 days after transplanting into our trial gardens —by far (by 3 weeks) the earliest variety we've grown.

The full grown plants are never over 12 inches tall and do not have a diameter spread of over 12 inches. They can be grown in window boxes and are usually loaded with very bright red fruits which results in their being quite a decorative window box item.

The round fruits are approximately 1 inch in diameter bright red inside and out, and very flavorful. Seed supplies have been very limited the last few years so we don't know the full potential sales of this fine novelty. 1/4 oz., **95c;** 1/2 oz., **$1.75;** oz., **$3.35;** 1/4 lb., **$10.00.**

ALL WEST COAST GROWN

FACTS ABOUT VAUGHAN'S LILY VARIETIES . . .

ACE: A Vaughan introduction and today's top variety. Vaughan's "Master Select" Ace is free-blooming with dark green, compact foliage and selected high disease-resistance. Forces in 120 to 122 days at 60 degrees.

KING: A West Coast grown free-blooming Vaughan's exclusive. This Master Selection Georgia-type lily is noted for vigor and disease-resistance. Usually somewhat taller than Croft or Ace. Forces in about 100 to 115 days at 60 degrees. Also a fine garden lily. A most reliable producer, even under difficult conditions.

CROFT: The original West Coast Lily with large blooms. Still a favorite of growers able to provide proper culture. 110 to 115 days forcing time at 60 degrees.

NELLIE WHITE: A variety introduced by Vaughan's almost ten years ago, again gaining some popularity. 110 to 115 days forcing at 60 degrees. Somewhat shorter foliage and smaller flowers than Croft with about the same bud count. Height is variable.

#44: A new lily under the Vaughan's "Master Select" program. It is one of the U.S.D.A. diploids. Under limited production until it has been thoroughly proven under all commercial conditions. Forcing time about 115 days. Height and bud count like Croft. Worth a try by all growers. #44 produces a very sturdy plant with flowers of good lasting quality.

Foil-grown are like a Mossed Layer. Allow four to six weeks for delivery. While a small inventory of these items are always on hand, you cannot depend on "at once" shipment. We may be just out and in which case there may be a six week delay on foil-grown and potted material.

All shipments are via **AIR FREIGHT** except those going to the Newark area, via Sealand Service, and can be picked up or will be forwarded.

Name of airport and town and your telephone number must be supplied so you can be notified on arrival.

GLOXINIA PLANTS—FOB FLORIDA

FORMULA MIXTURE: This is a well balanced mixture of the best commercial types made up from separate colors. Formula varies slightly with the season, as some varieties are better at one season than at others.

Mixture is approximately as follows:

60% Solid Red Types
10% Solid Blue-Purple Types
15% Red and White Combinations
10% Purple and White Combinations
5% Solid White

These varieties will mature in 90 to 120 days depending on climate. These seedlings are not to be compared to the common 5 petal varieties such as those from Belgium sources. All strains have flowers of 6 to 8 petals.

INDIVIDUAL COLORS

IMPROVED RED VELVET: Our finest red. Very strong producer of large ruffled cardinal red flowers. Well grown plants of this variety regularly produce 50 to 75 bloom in 5" or 6" pots.

ROYAL VELVET: Very heavy producer of velvety deep purple flowers. Strong growth habit.

NEW CHERRY BELLE: An improved strain that produces up to 100 blooms per plant. Deep cherry red flowers with border. Very showy and large plants.

PINK PEARL: A new strain with soft rose-red petals around a radiating white center. Produced by inbreeding our older but dependable red and white velvet.

SNOW BIRD: Gigantic pure white flowers of extreme beauty. Strong growing plants with beautiful foliage. Long lasting flowers that open under adverse conditions.

PURPLE CLOUD: Choice plants full of rich purple bloom that have a white center radiating out into the petals to make a pleasing effect.

IMPROVED COLOSSAL HYBRIDS: Super size flowers varying in color from soft rosy pink to red or wine color on beautiful soft foilage—fast maturing plants that hold their blossoms high and erect.

PURPLE BELLE: Deep purple flowers with good white border. A **new strain** not at all like the old Emperor Wilhelm. Heavy plants with lots of buds.

PLANCO BAGASSE POTS

THE MODERN ORGANIC TRANSPLANTER POTS

WHAT IS A BAGASSE POT

The bagasse pot is made from the residue of manufacturing sugar from sugar cane. Bagasse is the fiber and pith from the cane. The bagasse is processed and divided into two parts—fiber and pith. They are then reunited in proper proportion to make the pots. The fiber holds the pot together and the pith fills in the spaces between the fibers.

WHY A BAGASSE POT

Bagasse fibers are longer and larger in diameter than wood fibers, the binding agent in peat pots. These fibers make a bagasse pot stronger when either wet or dry. Since bagasse is manufactured, the pots are more uniform. Both the fiber and the pith will disintegrate, unlike peat pots. This disintegration allows the plant to develop its entire root system once transplanted into the soil. Disintegration will not take place above ground.

SHOULD I USE BAGASSE POTS

If you want total pot disintegration—YES! Bagasse Pots will hold up about 3-to-4 months above ground. For short term crops, you should use Bagasse Pots. For long term crops, we suggest you use Planco Val-Peat Pots. Planco Bagasse Pots are manufactured under the same high Quality Control procedures as are the Peat Pots. They are made in Louisiana where Sugar Cane is grown extensively. Try Planco Bagasse Pots this year—you will be glad you did.

Planco Bagasse Pots almost totally disintegrates in just one month after transplanting.

Sold in original cases only.

PLANCO—POT TRAYS

THE MODERN PROFITABLE WAY TO SELL PLANTS IN PEAT POTS

Modern selling calls for modern containers. More of your customers each year are willing to pay for better, more mature plants in pots. PLANCO Pot Trays hold either Peat Pots or Bagasse Pots. Using individual pots in trays is more economical. Should you lose one plant, you do not have to throw away the entire pak. Replace one plant and you still have a saleable pak.

Some growers have standardized their growing operation by using these trays both with and without pots. Try some this season. Your customers will be more satisfied with the quality of these individual pot plants in paks.

The plants on the right shown above were grown in Peat Lite mix. The plants on the left were grown in a good planting soil media. The differences are explained below.

- **Another First**
- **Peat-Lite Mix**
- **Vaughan's Peat Lite Mixture**
- **Completely Sterile**
- **Reduces growing time**
- **Weighs less**
- **Completely uniform**
- **Economically priced**

Vaughan Seed Company is proud to present to the growers the first "Soil" for bedding plants, pots, and bench crops. This Peat-Lite Mixture was developed by a large Eastern University. It has been used commercially by growers since Spring 1962. One grower planted 60,000 annuals in 3 inch peat pots using this mixture. Crops grown included petunias, salvia, begonia, marigold zinnias, celosia, ageratums amaranthus coleus alyssum and basil. Crops are ready for market in 3 to 5 weeks less time. This means less water, labor, fertilizer, heat and care. Weight is another factor. Peat-Lite mixture weighs ⅓ to ½ less than most potting mixtures.

This mixture contains peat, vermiculite, ground limestone, and other growth necessities. A three bushel bag weighs 25 lbs. One bag will fill 65 Garden Paks No 110 (5½x7½x 2-5 8) It will also fill 650 2¼" peat Pots. The cost to fill one pak is about 5 cents, and to fill one 2¼" pot about .004 cents.

Peat-Lite Mixture is also excellent for use as a sowing media. Roots will develop quickly. Moisture is more uniform and the plants are easily separated at transplant time.

ELECTRONIC SEALING

Vinyl is calendered in widths up to 6 ft. Wider covers are fabricated by electronically sealing stock width panels together. (Example: two 4½ ft. panels are sealed together to make a cover 9 ft. wide.) Covers may be ordered in any combination of stock widths, as shown above, in any length.

2 Panels
9 ft. to 12 ft. wide — **1¢** sq. ft. (add to custom

3 Panels—
13½ ft. to 18 ft. wide — **1.2¢** sq. ft. length price)

4 or More Panels—
19½ ft. and wider — **1.4¢** sq. ft.

Electronic Sealed Plastic Grommets—
6¢ per grommet

(For Partitions: Grommets spaced 12″ apart along one edge of the film.)

VINYL ADHESIVE

½ Pint Vinyl Adhesive (Brush Top Can)	**1.10**
Quart Vinyl Adhesive	**2.85**
Adhesive Dispenser	**.50**
Quart Thinner	**1.10**

Note: In ordering steam sterilization covers allow 10% in length for shrinkage and contour of the ground. If maximum light transmission is not necessary, electronic sealed covers of weatherable vinyl should be ordered in the diffused lite film—it is easier to fold. The polished surface of the clear film causes it to block.

Because of postal regulations, quart cans of adhesive and thinner must be shipped by Railway Express or Motor Truck.

GROWTH RETARDANTS

S-369 B-NINE growth control. Foliar spray height retardant for Mums, Azaleas and Hydrangeas.

A solution of B-Nine is sprayed on the leaves of potted chrysanthemums. B-Nine passes into the leaf then moves within the plant to reduce elongation of the stem. Treated plants develop a shorter, more compact habit of growth when compared to untreated.

Add one-half pint B-Nine solution to 2 gallons of water and spray to drip point as late as four to five weeks after the start of short days when side flower buds are removed. The chemical will retard stretching of the stem just below the flower.

GENERAL ELECTRIC SOIL HEATING Ⓙ SETS, CABLES AND CONTROLS

A General Electric heating cable set, buried in the soil, keeps the soil at the ideal temperature for germination and the early growth stages. Resulting plants can be set out far earlier, and are more quickly ready for market.

In greenhouses, G-E heating cable sets are often used for supplementary heating. By maintaining the soil temperature 15 to 20°F. above the air temperature in the greenhouse, they provide ideal growing conditions with reduced load on the general heating system.

LUMITE® Saran Shade Fabrics

Saran is subject to permanent shrinkage from the heat and sun. Do not install LUMITE too tightly and allow approximately 3% for shrinkage in calculating your measurements lengthwise. If LUMITE is installed with a little sag at the time of installation, it will shrink to a nice smooth cover within two to four months. In addition, saran fibers are self-extinguishing. When exposed to flame, they will soften and char but will not support combustion. The flameproof properties of saran conform to the standards set forth under the Flammable Fabrics Act.

If installed as outside shade where snow and ice occurs, remove or roll up LUMITE on frame during winter months to prevent damage to supporting structure.

All prices prepaid within continental U.S. Service Charge of $5.00 per order on all orders under $50.00

OSMOCOTE

FUNCTION OF THE COATING. Osmocote fertilizer consists of granules, of essential plant food content whicb bave been enclosed with a semi-porous resinous membrane. Water-soluble plant food such as nitrogen, pbosphorous, and potasb are dissolved as water gradually enters the capsule. An imbalance between the salts solution in the capsule and tbe surrounding water-moist soil establisbes diffusion-by-osmosis, and the plant food seeps out of the capsule at a predetermined rate and solution.

SLOW-RELEASE DURABILITY. All fertilizers depend upon the presence of moisture in order to release their nutrients. Liquid fertilizer, being completely in solution, represents one extreme while Osmocote represents the opposite. The protective coating sbelters the granules and regulates tbe amount of moisture whicb can dissolve tbe solid granules. Where moisture levels can be controlled, as in irrigation, the effective release rate can be extended as long as six months. In all cases, individual soil, climates, and seasonal conditions will require specific variations in tecbnique.

Incorporoted in Soil Pre-Mix. For general floriculture, mix Osmocote at the rates given below. Plants that are particularly sensitive to conventional fertilizer sbould receive Osmocote at balf tbe recommended rates.

Claims and Guarantee

We do our best to grow and pack our roses to please our customers. Just prior to leaving our warehouses they are inspected and are in good condition. Therefore, if roses arrive in other than perfect condition it is our customers responsibility to request an immediate inspection from the delivering carrier and forward this report to us within 5 days. Because of the perishable nature of roses we will not honor claims made at a later date.

We cannot and will not be held responsible for shelf life of our roses. However, if our customer sells a rose which does not grow we will replace that rose on their next year's order at no charge. The return of the tag from this rose will be a necessary requirement for this replacement.

Vaughan's Arizona Grown Roses

FOR POT FORCING

Suggestions for Forcing Pot Roses for Easter and Mother's Day

These suggestions are based on information supplied by customers who have successfully grown pot roses for several years. Proper allowance must be made for any unusual conditions in your area.

When to Pot—Planting for Easter should be done 3 months before the holiday occurs. We time our shipments so you receive the bushes 2-3 days before planting time.

Pruning—At time of potting prune tops to 6 inches above bud union. Prune roots to fit the pot leaving as many fibrous roots as possible.

Soil—Any good greenhouse soil is satisfactory. Be sure to tamp the soil well around the roots and water thoroughly. Some growers use a tamping stick to pot tight.

Temperatures—Immediately after potting 50° and high humidity. Some growers use wet burlap over the plants until they sprout. After sprouting, transfer to a sunny bench and use 58° temperature. 62° will advance the flowering. 55° will retard the flowering. Temperatures above 58° results in a loss of quality.

Pinching—Advisability of pinching varies. Some growers insisting it results in a better pot plant, others insisting it does more harm than good. In the Chicago area a soft pinch 8 weeks before Easter results in flowers at Easter at 58°. A pinch 7 weeks before Mother's Day is proper timing.

Watering and Feeding—After the shoots are well started, soil should be kept as evenly moist as possible. Feeding with soluble fertilizer, like Vaughan's Instant Glamour, should be done about three times during the plants growth. The first application about six weeks after potting.

VAUGHAN'S INSTANT GLAMOUR ROSES

Potted in Plantable Containers

Over 100 popular garden varieties available.

Customers just snap out plastic top and bottom, place the rose, still in the container, in a hole. Roots grow out bottom, container disintegrates in soil. Complete planting instructions on label.

A sensationally complete sellout in 1964!

Order early for Instant Glamour Profits in '65!

Customer Satisfaction Guaranteed—Instant Glamour Roses are growing already so there's no worry about survival. Planting them, container and all, prevents transplant shock.

Priced to Sell—Our suggested retail is only 25c per plant more than for patented package roses. For example we suggest a retail price of $3.25 for Arlene Francis, $2.75 for New Yorker and $1.98 for all non-patented varieties. You are allowed a full 40% discount from these suggested retail prices.

Packing—There are 12 Instant Glamour Roses in each carton. Minimum shipment is 5 cartons.

You can recapture potted plant sales from supermarkets by offering these exceptionally fine roses potted and in full bloom for Easter and Mother's Day. Their popularity is increasing all the time. Recommended varieties make wonderfully-free-blooming specimens. XXX grade result in large plants; XX grade in medium plants. Shipments from December through February.

Patented varieties are offered under license from the patentee and are for resale at or above the retail prices specified. Wholesale prices on patented varieties are per variety. Quantities of patented varieties cannot be grouped with standard varieties for quantity prices. All standard varieties may be grouped to take advantage of the lowest quantity price.

WHY ARIZONA GROWN ROSES FROM VAUGHAN'S ARE BETTER

Every step in our production program is aimed at increasing the starch content of our roses. Sunlight, temperatures, native fertility of the soil and absence of disease in Arizona all are favorable for more starch. The use of Dr. Huey root-stock, special fertilizers, regulated watering schedules—and our insect control programs contribute to more starch—and all this additional starch results in better and faster breaks and growth, less transplanting shock, longer storage life—and more customer satisfaction.
